Git 2.38.0 Setup

Choosing the default editor used by Git
Which editor would you like Git to use?

Use the Nano editor by default

GNU nano is a small and friendly text editor running in the console window.

This is the recommended option for end users if no GUI editors are installed.

Git 2.38.0 Setup

Adjusting the name of the initial branch in new repositories
What would you like Git to name the initial branch after "git init"?

Let Git decide

Let Git use its default branch name (currently: "master") for the initial branch in newly created repositories. The Git project intends to change this default to a more inclusive name in the near future.

Override the default branch name for new repositories

NEW! Many teams already renamed their default branches; common choices are "main", "trunk" and "development". Specify the name "git init" should use for the initial branch:

main

This setting does not affect existing repositories.

Git 2.38.0 Setup

Adjusting your PATH environment
How would you like to use Git from the command line?

○ **Use Git from Git Bash only**

This is the most cautious choice as your PATH will not be modified at all. You will only be able to use the Git command line tools from Git Bash.

◉ **Git from the command line and also from 3rd-party software**

(Recommended) This option adds only some minimal Git wrappers to your PATH to avoid cluttering your environment with optional Unix tools.
You will be able to use Git from Git Bash, the Command Prompt and the Windows PowerShell as well as any third-party software looking for Git in PATH.

○ **Use Git and optional Unix tools from the Command Prompt**

Both Git and the optional Unix tools will be added to your PATH.
Warning: This will override Windows tools like "find" and "sort". Only use this option if you understand the implications.

Git 2.38.0 Setup

Choosing the SSH executable
Which Secure Shell client program would you like Git to use?

- (●) **Use bundled OpenSSH**
  This uses ssh.exe that comes with Git.
- ( ) **Use external OpenSSH**
  NEW! This uses an external ssh.exe. Git will not install its own OpenSSH (and related) binaries but use them as found on the PATH.

Git 2.38.0 Setup

Choosing HTTPS transport backend
Which SSL/TLS library would you like Git to use for HTTPS connections?

- (●) **Use the OpenSSL library**
  Server certificates will be validated using the ca-bundle.crt file.
- ( ) **Use the native Windows Secure Channel library**
  Server certificates will be validated using Windows Certificate Stores.
  This option also allows you to use your company's internal Root CA certificates distributed e.g. via Active Directory Domain Services.

Git 2.38.0 Setup

Configuring the line ending conversions
How should Git treat line endings in text files?

- (●) **Checkout Windows-style, commit Unix-style line endings**
  Git will convert LF to CRLF when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Windows ("core.autocrlf" is set to "true").
- ( ) **Checkout as-is, commit Unix-style line endings**
  Git will not perform any conversion when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Unix ("core.autocrlf" is set to "input").
- ( ) **Checkout as-is, commit as-is**
  Git will not perform any conversions when checking out or committing text files. Choosing this option is not recommended for cross-platform projects ("core.autocrlf" is set to "false").

Git 2.38.0 Setup

Choose the default behavior of `git pull`
What should `git pull` do by default?

- (●) **Default (fast-forward or merge)**
  This is the standard behavior of `git pull`: fast-forward the current branch to the fetched branch when possible, otherwise create a merge commit.
- ( ) **Rebase**
  Rebase the current branch onto the fetched branch. If there are no local commits to rebase, this is equivalent to a fast-forward.
- ( ) **Only ever fast-forward**
  Fast-forward to the fetched branch. Fail if that is not possible.

Git 2.38.0 Setup

Configuring extra options
Which features would you like to enable?

☑ **Enable file system caching**

File system data will be read in bulk and cached in memory for certain operations ("core.fscache" is set to "true"). This provides a significant performance boost.

☐ **Enable symbolic links**

Enable symbolic links (requires the SeCreateSymbolicLink permission). Please note that existing repositories are unaffected by this setting.

Git 2.38.0 Setup

Configuring experimental options
These features are developed actively. Would you like to try them?

☐ **Enable experimental support for pseudo consoles.**

(NEW!) This allows running native console programs like Node or Python in a Git Bash window without using winpty, but it still has known bugs.

☐ **Enable experimental built-in file system monitor**

(NEW!) Automatically run a built-in file system watcher, to speed up common operations such as `git status`, `git add`, `git commit`, etc in worktrees containing many files.

MINGW64:/c/Users/pihaza

```
pihaza@AT-62SF9K3 MINGW64 ~
$ git
usage: git [-v | --version] [-h | --help] [-C <path>] [-c <name>=<value>]
           [--exec-path[=<path>]] [--html-path] [--man-path] [--info-path]
           [-p | --paginate | -P | --no-pager] [--no-replace-objects] [--bare]
           [--git-dir=<path>] [--work-tree=<path>] [--namespace=<name>]
           [--super-prefix=<path>] [--config-env=<name>=<envvar>]
           <command> [<args>]

These are common Git commands used in various situations:

start a working area (see also: git help tutorial)
   clone     Clone a repository into a new directory
   init      Create an empty Git repository or reinitialize an existing one

work on the current change (see also: git help everyday)
   add       Add file contents to the index
   mv        Move or rename a file, a directory, or a symlink
   restore   Restore working tree files
   rm        Remove files from the working tree and from the index

examine the history and state (see also: git help revisions)
   bisect    Use binary search to find the commit that introduced a bug
   diff      Show changes between commits, commit and working tree, etc
```

To verify if installation was successful, just type Git in any terminal

- Command Line,
- VS Code Terminal, or
- Git Bash Terminal as shown here

Creating a new Pull request to conclude

Welcome to pull requests!

Pull requests help you collaborate on code with other people. As pull requests are created, they'll appear here in a searchable and filterable list. To get started, you should create a pull request.

Practice Lab 2

STUTERN

Clone this repo here:

- Create a new **BRANCH** with the name <your name>_<your track>_<your cohort>.
- **CHECKOUT** to the new branch.
- Make changes to the **Repo** in the **BRANCH** you created by adding a **README.md**.
- Within the created **README.md** file, add your name, cohort and track.
- Save this changes and add the **README.md to** git.
- Create a **REMOTE BRANCH** of the **LOCAL BRANCH** you have created and then make a **PULL REQUEST** back to the **BRANCH** you had **CLONED** earlier.
- Submit the link to the **PULL REQUEST** this will be your submission for this task.
